

Wenlock Spring: *just as nature intended*

Wenlock Spring has been bottled at source in the beautiful South Shropshire countryside since 1989. This fresh spring water is sourced responsibly and packaged in an environmentally conscious way.

Wenlock Spring is naturally filtered through the rock strata of the Wenlock Edge, providing the water with its unique blend of minerals, including selenium and calcium. This delivers a refreshingly clean and delicately sweet taste. Wenlock Edge is an area of outstanding natural beauty situated within a Site of Special Scientific Interest. This natural water source has been in use continually since the eleventh century.

Wenlock Spring is a family business supported by a dedicated team who are committed to their customers. The company are continually looking at ways to integrate the highest environmental standards into the business; recycling, energy saving and the reduction of drink miles. In fact, 99% of the materials used on site are recycled.

Wenlock Spring meets rigorous industry standards as designated spring water and has attained the British Retail Consortium Higher (Grade A) accreditation for the bottling of its water in both glass and plastic. It has also achieved the highest level of accreditation from the British Water Cooler Association.

“ We chose Wenlock Spring for its excellent clean taste, the bottle presentation and the subtlety of the sparkling water. Our customers are very discerning; everything must complement the food and the whole dining experience. ”
